How to Grow It

- **Fun Fact!** The average ear of corn has over 800 kernels, in 16 rows! There is one piece of silk for each kernel!
- **Difficulty:** Moderate
- **Growing Season:** Corn has a long growing season, with early-harvested varieties and cooler temperature varieties.
- **Sun & Soil:** Corn does best in full sun and well-draining, very fertile soil!
- **Size and Planting:** Plant seeds 1 inch deep, and 4-6-inches apart! Leave up to 3 feet in between rows.
FUN FACT! Corn kernels are the seeds!
EXPERT TIP! Corn has a lot of roots close to the surface, so 'hill up' soil around the plant base to give it more space to take root!
- **Planting Time:** Early spring
EXPERT TIP! Interplant early season corn and cooler season corn for a long corn harvest!
- **Time to Harvest:** Depends on when the seeds were planted (early-, mid-, or late-season) but can range from 55 to 85 or more days!

FUN FACT! Corn has some hybrid relatives like normal, super-enhanced, and super sweet, all with different levels of sweetness!
